PORTFOLIO
asdalexey.github.io

CORE SKILLS

Angular

Angular 2–22, Standalone, Signals, Zoneless, OnPush, NgRx, RxJS, ControlValueAccessor, Angular Material, Ag-Grid

Language

TypeScript, JavaScript (ES2015+), HTML5, SCSS / CSS, BEM, Responsive Design, Web Components

Architecture

Nx Monorepo, Micro-frontends, Design Systems, Clean Architecture, i18n / Localization, SSR (@angular/ssr)

Platforms

Web (SSR), Smart TV (Tizen / webOS), Mobile (Ionic, iOS/Android), Desktop (Tauri + Rust)

CI/CD & Infra

GitLab CI/CD, Docker (multi-stage), Nginx, Kubernetes / Kustomize, Feature Flags

Testing

Jest, Vitest, TestBed, vitest-auto-spy, 100% coverage gates, TDD

Backend & Tools

Node.js, Express, REST, WebSocket, PostgreSQL, SQLite, Redis, Rust, Figma, ESLint / Prettier / Stylelint

Leadership

Tech Lead, Frontend Architecture, Code Review, Mentoring, Hiring, Performance Optimization, AI-assisted Dev

LANGUAGES

Russian Native
English Professional (B2)

EDUCATION

Taganrog State Pedagogical Institute (A.P. Chekhov)

Physics & Mathematics, 2004 — 2009 · GPA 4.97 / 5

SUMMARY

Tech Lead and Senior Frontend Engineer with 14+ years building production web apps — 11+ of them on Angular (v2 → v22). I architect large-scale Angular applications end-to-end and ship them across every platform: web (SSR), Smart TV, mobile (Ionic) and desktop (Tauri/Rust). Reactive-first with NgRx, RxJS, Signals and a zoneless, standalone, OnPush architecture. I build GitLab CI/CD from scratch, drive a testing-first culture (up to 100% coverage, enforced by CI gates) and lead frontend teams — code review, mentoring and hiring. Currently driving AI-assisted development with custom Claude Code skills, agents and hooks.

KEY HIGHLIGHTS

- Sped up multi-select on large virtualized lists ~200× — from 180–200 ms down to 0.4–0.5 ms per item.
- Led migration from service-based to a layered NgRx architecture with clean business-logic separation.
- Raised unit-test coverage to 100% on shared libraries, gated in CI alongside duplication and circular-dependency checks.
- Ran 70+ technical interviews; hired, onboarded and mentored frontend engineers.
- Published vitest-auto-spy on npm — typed auto-mocking for Vitest.

EXPERIENCE

Senior Angular Developer

2023 — Present

Remote

- Led a team of 5+ developers — decomposed complex work, estimated timelines, set goals and shipped a release at the end of every sprint.
- Owned the frontend architecture — modular Nx boundaries, NgRx Signals state and reusable patterns that keep large apps maintainable as they scale.
- Set architectural standards and eliminated anti-patterns (god components, leaky effects, cross-layer coupling) via custom lint rules, ADRs and code review.
- Mentored engineers and ran code reviews with constructive feedback, raising code quality and accelerating the team's growth.
- Cut critical production bugs by 25% through test automation (Vitest / Jest) and CI/CD pipelines.
- Built a design system and a shared library (tests, utilities, components) reused across projects — improving consistency and cutting delivery time by 15%.
- Planned product architecture with backend and design, ran stand-ups, and set up unified CI/CD templates that sped up my team and the adjacent teams I hired and led.

Tech Lead / Senior Frontend

2019 — 2023

The 5th Kind · US, Remote

- Built a distributed digital-asset-management platform used by Marvel, Disney, Warner Bros., Epic Games and Universal (via Sohonet).
- Led the migration to a layered NgRx architecture with clean business-logic separation across effects.
- Sped up multi-select on large virtualized lists ~200× (180–200 ms → 0.4–0.5 ms) via an OnPush + immutability overhaul.
- Wrote custom virtual-scroll strategies for dynamic-height items and complex forms via ControlValueAccessor.
- Ran 20+ technical interviews and helped build the team's code-review process.

Senior Angular Developer

2018 — 2019

Arcadia Inc. · Taganrog

- Designed the product's UI architecture and refactoring roadmap; shipped 10+ major features.
- Introduced CSS variables and the OnPush + immutability strategy across the codebase.
- Built the mobile iOS/Android app with Ionic; conducted 20+ Angular/JS interviews and trained new hires.

Senior Full-Stack Developer

2015 — 2018

Umbrella IT · Taganrog

- Full-stack delivery (Angular + Node.js) for international US/EU clients — Top Rated, 100% Job Success on Upwork.
- Shipped SPAs and Node.js back ends (rademacher.de, pooltrackr.com).

Frontend Web Developer

2012 — 2015

TutMee Agency · Taganrog

- Built 50+ landing pages and online stores with heavy SVG/animation; focus on responsive layout and performance.

PERSONAL PROJECTS / OPEN SOURCE

Litely

Tauri · Angular 22 · Rust

Cross-platform desktop app for batch image / video / PDF compression (WebP, AVIF, JPEG, PNG, SVG). Browser extension pastes compressed files straight into Jira / GitLab with Cmd+V. Watch-folders, system tray, before/after compare. → asdalexey.github.io/litely

vitest-auto-spy

TypeScript · Open Source · npm

Typed auto-mocking for Vitest — the spiritual successor to jest-auto-spies. One API, three runtimes (Vitest, Bun, Node.js) behind a swappable MockAdapter. Typed spies from a class or from a type alone, Observable / promise / signal controls, DI helpers for Angular and NestJS. Zero dependencies, 100% coverage. → github.com/ASDAlexey/vitest-auto-spy

Bonds Tracker

[Angular 22](#) · [Tauri 2](#) · [Rust](#) · [SQLite](#)

Personal bonds-portfolio tracker across multiple T-Bank Invest accounts — smart-portfolio optimizer, audit with swap suggestions, scored screener, coupon calendar and a goal dashboard. Real-time analytics over Tinkoff / MOEX ISS / CBR APIs, KMV-Merton default risk, Plotly, Telegram bot, Rust engines.

SundayRun

[Angular 22](#) · [Bun](#) · [Vitest](#) · [GitHub Pages](#)

Web app for a community park-run club (Taganrog). Organizers upload stopwatch results, the app computes rankings and generates the official PDF protocol in the browser, then publishes each result set to the repo archive in one atomic commit. Zoneless Angular, 100% test coverage. → [asdalexey.github.io/sundayrun](#)

Sportdiary

[Ionic](#) · [Angular](#) · [Node.js](#) · [iOS](#) / [Android](#)

Full-stack running tracker for iOS & Android, built solo end to end — GPS tracking with live route maps, automatic lap detection, per-workout stats, volume analysis with personal records and a social feed. Node.js backend self-hosted on my own VPS; ran in production for over a year.

Claude Code config & skills

[AI](#) · [Automation](#)

Custom Claude Code skills, agents and hooks that encode project conventions, code generation and token-optimization — including an AI code-review workflow built for large Angular MRs.
